I found out if I use the plan option in apple maps I can set the time and date back to 6/28/2011 at 5:13 PM

This seems to accurately give an estimate of a 32 minute trip from Centegra to McGuire's home and back to Walgreens without stopping at the correct time of day on the correct date.

Not to mention I didn't add in the time it would have taken to leave the hospital and walk to the car, stop in and meet with Caroline and get the \$50.00 in fantasy money, park and walk to the back of the Walgreens store where the pharmacy is.

Hospital Timestamp 5:13 PM

Walgreens Timestamp 5:39 PM

That's only 26 minutes and clearly shows it wasn't possible.

For some reason the attached map doesn't show the third pharmacy (CVS) which is right along the same route. It does show it (CVS) if I zoom in further but then I can't get the whole route in the map. I can create the map zoomed in showing the 3rd pharmacy (CVS) That I would have had to pass to get to the Walgreens according to the Mast/McGuire/Gagnon fantasy tale.

Also, I can create another map showing Walgreens in Fox Lake is a lot closer to McGuire's home (only 10 Minute route).

Does the attached PNG file work as an exhibit for the McGuire/Gagnon/Mast fantasy Rx story?
